

fmaps **fmaps - Linux Command**

SYNOPSIS **fmaps** [--console *LO*

```
G=LEVEL,...
][
--log
LOG=LEVEL,...
]
pids
corefile
...
```

DESCRIPTION

fmaps

Executes the frysk map dump utility. *fmaps* is a utility that prints out a process or a corefile's maps.

--console

```
LOG=LEVEL,...
```

Enable logging to the console and at the specified log level. The log level can be: [OFF | SEVERE | WARNING | INFO | CONFIG | FINE | FINER | FINEST].

--log

```
LOG=LEVEL,...
```

Specify the file logging level. The log level can be: [OFF | SEVERE | WARNING | INFO | CONFIG | FINE | FINER | FINEST].

EXAMPLE

```
fmaps pid [...]
```
